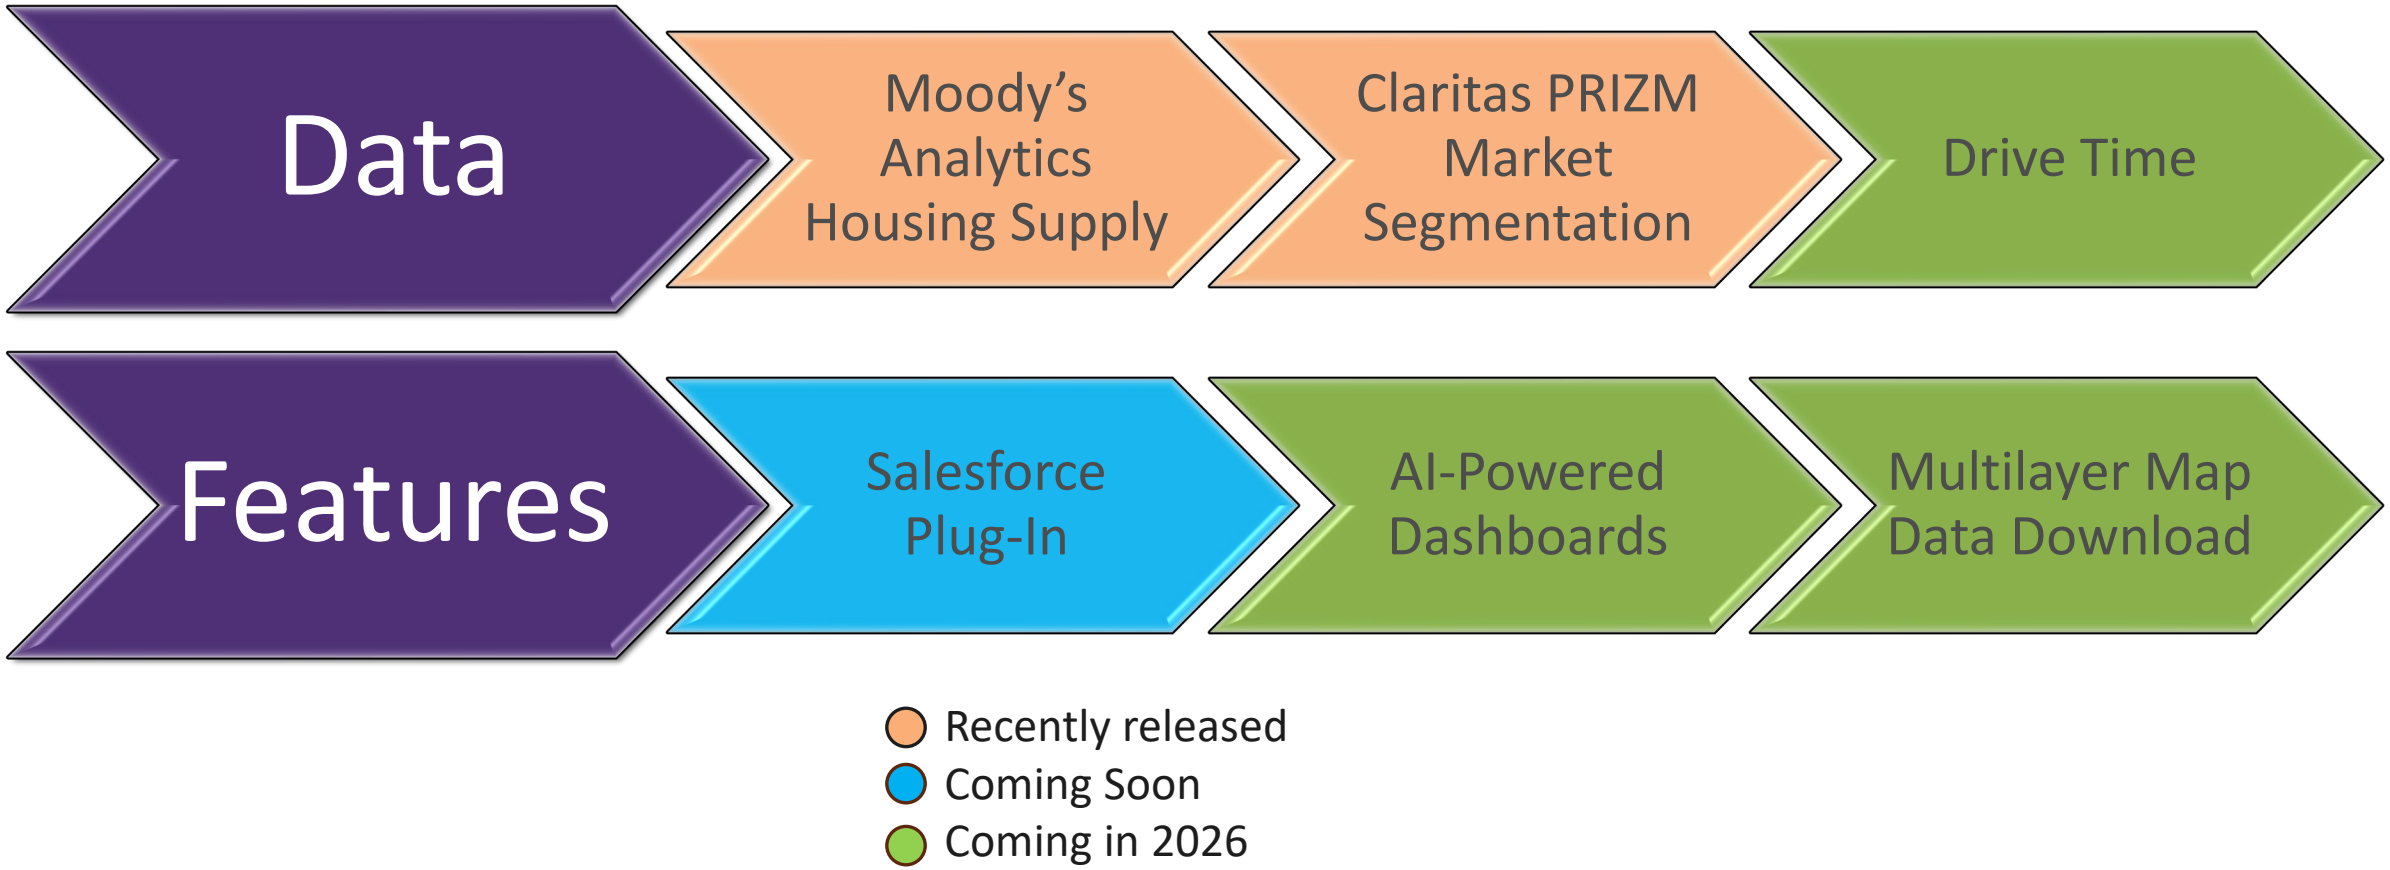
Research and Academic Projects

Entrepreneurship and Small Business Development

Home Buying Decisions

PolicyMap Roadmap



What are People saying about PolicyMap

"Having the data compiled just for our service area saved a great deal of time. Our service area covers numerous municipalities and extends into other counties so it can be somewhat of a cumbersome process to put everything together. I greatly appreciate that this was provided."

"I used our Community Profile several times. It came in handy for a grant that we were working on. I used the data to write a letter in support of our local Penn State Campus, so that they could remain open. I also used it to support changes within our budget, our staffing, and our programming efforts."

"We use PolicyMap for compiling and analyzing demographic information including race, age, gender, housing, income, primary language spoken at home and number of people with veteran status or disability. We've primarily broken them down by zip code and census tract, specifically to describe service areas for specific branches, the entire library system, and to answer data requests for items such as grants."

"PolicyMap is easy to read and you can quickly find the statistics you need. I also liked that it included comparisons by year or to the state as a whole."
